Manage Subscription Manifests

- [Synopsis](#synopsis)
- [Parameters](#parameters)
- [Examples](#examples)

Synopsis

- Upload, refresh and delete Subscription Manifests

Requirements

- requests

Parameters

Parameter	Choices/Defaults	Comments
manifest_path path		Path to the manifest zip file This parameter will be ignored if *state=absent* or *state=refreshed*
organization string / required		Organization that the entity is in
password string / required		Password of the user accessing the Foreman server. If the value is not specified in the task, the value of environment variable SATELLITE_PASSWORD will be used instead.
repository_url string		URL to retrieve content from aliases: redhat_repository_url

server_url string / required		URL of the Foreman server. If the value is not specified in the task, the value of environment variable `SATELLITE_SERVER_URL` will be used instead.
state string	Choices: ● absent ● present ← ● refreshed	The state of the manifest
username string / required		Username accessing the Foreman server. If the value is not specified in the task, the value of environment variable `SATELLITE_USERNAME` will be used instead.
validate_certs boolean	Choices: ● no ● yes ←	Whether or not to verify the TLS certificates of the Foreman server. If the value is not specified in the task, the value of environment variable `SATELLITE_VALIDATE_CERTS` will be used instead.

Examples

```
- name: "Upload the RHEL developer edition manifest"
  redhat.satellite.subscription_manifest:
    username: "admin"
    password: "changeme"
    server_url: "https://satellite.example.com"
    organization: "Default Organization"
    state: present
    manifest_path: "/tmp/manifest.zip"
```
